AA200039 and AAV28494 are complete h-TREK1 polynucleotide and polypeptide sequences. hereals is a two pore potassium channel, and the gene maps to human proposome 1q32, between the markers D1S237 and W15105. The polynucleotide is sequence of h-TREK1 can be used to diagnose a disease or susceptibility of a disease related to expression or activity of h-TREK-1 polypeptide. The methods of diagnosis may be used in the treatment of diseases including cancer, pulmonary.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             09-OCT-1998;

acid-sensitive potassium channel 2), a novel member of the 2P domain potassium channel family that also includes TW K-1 (see AAV79673) and TASK1 (see AAV79674). TASK2 is a unique potas ium transport channel that is regulated by external pH, and is predo inantly expressed in kidney and epithelial tissues. The invention clates to: identification of the native renal channel with the properties of TASK2; identification of potent pharmacology that specifically modulates the activity of the TASK2 channel incalizing K+ channels comprising the TASK2 gene has been incally and the generation of mice in which the TASK2 gene has been incall and the invention also relates to diagnostic tests and therapentic methods to: detect
                                                                                                                                                                         New nucleic acid encoding a non-inactivating potassium transport channel, designated TASK, of hypertension or dysfunctions of the kidne.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CC This sequence represents the human TWIK-3 protein of the invention. The CC TWIK-2 (Tandem of p domains in a Weak Inward rectifying potassium (K+) CC channel-2), TWIK-3 and TWIK-4 nucleic acids and proteins are useful as CC targets for developing modulating agents to regulate a variety of CC cellular processes. They may be useful for developing novel diagnostic CC and therapeutic agents for potassium channel associated disorders, CC e.g. central nervous system disorders (e.g. Alzheimer's disease, CC dementia, Parkinson's disease, multiple sclerosis, amyotrophic lateral CC sclerosis, progressive supranuclear palsy, epilepsy, Creutzfeldt-Jacob CC disease), psychiatric disorders (e.g. depression, schizophrenic CC disorders, Korsakoff's psychosis, mania, anxiety disorders or phobic CC disorders), learning or memory disorders (e.g. amnesia or age-related CC memory loss), neurological disorders (e.g. migraine), obesity, and CC cardiac disorders. The nucleic acids, proteins, protein homologues and CC cardiac disorders. The nucleic acids, proteins, protein homologues and CC cardiac disorders. The nucleic acids, be inserted into vectors and CC memory lossy vectors, to express TWIK protein, to detect TWIK CC mRNA, modulate TWIK activity, and screen for drugs or compounds that CC modulate TWIK activity. Host cells may be used to produce non-human CC transgenic animals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

The cDMA and the vectors can also be used to create transgenic animals (especially knock-out animals) for use as models of TWIK-1 related diseases. Analysis of the sequence of the TWIK-1 gene may be used for pre-natal diagnosis of disease. Antibodies can be used to detect TWIK-1 channels and for inhibiting or activating the channels in vivo.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                channels consisting of 4 transmembrane segmc 3 and two P domains, being only weakly rectifying. The CDNA, vect 3, the cells express TWIK-1 type channels and the protein are use 50 compensate for deficiency of potassium channels in varias tissues. Compounds
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence represents a protein commising a potassium channel with the properties of a TWIK (Tandem of P downins in a Weak Inward rectlifying K+) 1 channel. This is the first wher of a new family of channels consisting of 4 transmembrane segme and two P domains, and

Description

Sequence Sequence

st

derived

greater than or equal

the number of results predicted by chance to have a r than or equal to the score of the result being printed, ed by analysis of the total score distribution.
